

## **ZIP CODE INFORMATION REGARDING TFI SURVEY**

**We limited the survey to single-family residential dwellings in neighborhoods most effected by military overflights. If a zip code did not contain any neighborhood which was under or near one or more regular military flight paths, it was not included in the survey. We did not survey the following zip codes for the reasons given below:**

85707 & 85708 are PO Boxes for D-MAFB

85709 is a PO Box for Pima Community College

85717, 85721 & 85722 are PO Boxes for the UA

85718 lies outside of Tucson, and is not near regular military flight paths

85723 is a PO Box for the VA Hospital

85724 is a PO Box for UMC

85757 lies outside of Tucson

85710, 85747, and 85748 are not near regular military flight paths

### **Tucson Forward Survey Clarification Notes:**

#### **\* Clarification regarding the first statement of the Executive Summary:**

Of all the responses to AF plans to bring in louder, riskier planes at D-M and ANG, 53% was the lowest percentage opposed, and 57% was the highest percentage opposed. So the responses spanned from 53% to 57%.... a span of 4 percentage points. The 53% was in response to risk regarding planes flying out of ANG, and the 57% was in response to noise regarding planes flying out of D-M.

#### **\* Regarding the confidence level/margin of error:**

Within a 99% confidence level, each answer in this TFI survey is +/- four (4) percentage points, if extrapolated to the entire targeted population of 29,093 single-family residential dwellings in the neighborhoods most impacted by current or proposed military overflights.
